Screening and management of prediabetes in adults in primary care in Australia - Joint position statement

Prediabetes is a metabolic condition characterised by elevated blood glucose. It doesn't meet the diagnostic criteria for diabetes. Early detection and management of this condition are important to prevent or delay diabetes.

We produced this joint position statement in collaboration with:

- the Australian Diabetes Society (ADS)
- the Australian Diabetes Educators Association (ADEA)
- Exercise and Sport Science Australia (ESSA)
- Pharmaceutical Society of Australia (PSA)

The statement outlines our recommended approaches to screening and management of prediabetes in primary care.

For more, read the full joint position statement.
